

MULTIDISCIPLINARY APPROACH TO THE STUDY OF CRISIS PHENOMENON

Yegorova Yu. O.

Graduate Student,

Drohobych Ivan Franko State Pedagogical University

The article examines the causes of the crisis and approaches to its definition in modern conditions in different sciences, analyzes the interpretation of the category "crisis" by various authors, and also examines the interrelationship between the conditions for the emergence of the crisis and the ways of its impact. Proposed own definition of the concept

of "crisis". A wider range of factors of the emergence of the crisis is revealed in comparison with traditional approaches. It is proved that the main for understanding the consequences of crises in terms of advantages and disadvantages is the recognition that the consequences of any crisis can not only be negative, but also encourage positive changes.
